New Features/ Improvements/Fixed Issues

Data Disseminator

- A setting value for "ShoreWebBaseUrl" was missing from the Data Disseminator service configuration. It caused the exception from SendVesselProfileToShoreAsync call while sending NCEI packages. (9233)

Events

- Fixed a delete issue and prevents event templates from being deleted if event data is available, users must clean event data before deleting templates. (9185, 9277)

CFE

- Those calculated '*Polar Average Over Sample*' items caused ACQ failed to start. (9187)

Quality Assurance / Quality Control (QA/QC)

- Applied new checksum definitions to NMEA data fields: the checksum at the end of messages, testing the message start character, and testing the message labels. (7474)
- Removed the extra hyphen for a QAQC definition in an error state (looks like a negative in the monitor page). (9065)
